

Dear client,

The following information is obtained during the data quality assessment.

1. There are columns in the datasets with missing values. Below is a list of columns that have missing values.
 - job_industry_category
 - job_titlelast_name
 - online_order
 - brand
 - product_line
 - product_class
 - product_size
 - standard_cost
 - Tenure
 - DOB
2. At the time of the transaction, customer Jephthah Bachmann's age was recorded as 174, which was incorrect.
3. In the customer demographics, the data for the 'default' column is inconsistent.
4. The data for the 'product first sold date' column in Transactions is not date.
5. We don't have customer information for three transactions.

We're progressing with data cleaning.

Regards

Anwar M
